

The Dakota Driveway Alert

Up to 800m Line of Sight range to house.

The Dakota Driveway Alert is a feature filled, wireless motion PIR Sensor and Receiver Kit with an 800m line of sight radio range. Perfect for rural properties that don't have a constant source of power at main gates and entry points.

Expandable System

The Receiver can be programmed to accommodate up to 4 Sensors. The Sensors can be a mix of PIR, Point to Point Beam Transmitter, or a Probe Transmitter.

Adjustable Detection Range

The PIR Sensor has an adjustable detection range up to 15m, picking up any person, vehicle or large animal. It is designed to ignore small animals such as cats and rabbits, and any moving trees or shrubs. The Sensor is powered by a 9v Battery, and will last approximately 12 months.

Time Delay for Easy Exit

The system offers a 5 minute exit delay so that you can leave the house without disturbing the occupants inside, as well as a reminder beep and counter functions. The volume is adjustable and the Receiver can be turned off using the On/Off switch.

Programmable Audible Alerts

The mains powered Receiver can be programmed to sound different alerts for each zone, allowing you to distinguished where the visitor has entered the property.
